

## ***Chemistry In Emerging Technologies Lectures***

**Peckham Hall, Rm. 12 - Nazareth College, 4245 East Ave., Pittsford, NY**

**Monday, October 6, 2014**

### ***An Introduction to the New Kodak: A Technology Company Focused on Commercial, Packaging and Functional Printing***

**7:00 p.m.:** **Nancy S. Ferris, Ph.D.**, Director, Kodak Research Labs,  
Eastman Kodak Company  
**Hwei-ling Yau, Ph.D.**, Senior Research Scientist, Kodak  
Research Labs, Eastman Kodak Company

**Abstract:** Over the past two years, Eastman Kodak Company has experienced several major transitions, including business restructuring under a Chapter 11 process. In 2013, the Company emerged from Chapter 11 as the new Kodak – leveraging a long heritage of strong technologies with a renewed business focus on Commercial, Packaging and Functional Printing. The Kodak businesses are now framed by a range of proprietary Kodak technologies that enable high quality, high-speed digital printing, package printing and functional printing.

An introduction to the new Kodak will include a description of some product offerings from the Company along with the technology platforms that are the focus of Kodak's continued investment to create new applications in new markets. These technology platforms will include aspects of materials science, deposition science and interfacial systems control.

**Dr. Nancy Ferris** is currently the Director, Kodak Research Labs and Vice President of the Kodak Technology Center, Eastman Kodak Company. She has over 30 years of experience in technology research and technology leadership. Currently at the Kodak Research Laboratories, Dr. Ferris oversees the primary, scientific invention investment for Kodak and directs a staff of scientists engaged in research in the fields of materials science, device physics and image science.

As a staff scientist, Dr. Ferris's work included characterization of complex material interfaces, and she is published in this field. For the past 16 years she has held various leadership positions in Analytical Science, Materials Science, Computational Science and Device Physics. Dr. Ferris holds a B.Sc. degree in Chemistry from LeMoyne College, a Ph.D. in Physical Inorganic Chemistry from the University of Texas at Austin and completed Executive Leadership Development programs at Smith College and Northwestern University.

**Hwei-ling Yau** was born and raised in Taipei, Taiwan. She received her B.S. degree in chemistry at National Taiwan University and Ph.D. in material science and engineering at University of Illinois at Urbana-Champaign. She started her career at Kodak Research Lab immediately afterwards in 1985. Her strength has been designing and testing of functional materials for existing or new imaging systems.

**8:15 – 9:30 p.m.:** **Reception / Poster Session – Peckham Hall Lobby**
